

Md Anisur Rahman Chowdhury

Systems Administrator | Linux, Windows Server, and Enterprise Infrastructure

Targeted resume for systems administration roles across Linux, Windows Server, Active Directory, mail and file services, monitoring, and production support.

PROFESSIONAL SUMMARY

Systems Administrator with 7+ years of experience across enterprise IT and ISP environments supporting production servers, infrastructure services, user access, and day-to-day operations.

Hands-on background in Linux and Windows Server administration, Active Directory, DNS, DHCP, mail systems, file services, IP-PBX, monitoring, troubleshooting, and hybrid business infrastructure.

Current graduate research adds depth in cloud security, serverless systems, and secure automation while keeping the focus on practical systems operations.

CORE EXPERTISE

Linux and Windows Server Administration; Active Directory, User Provisioning, and Access Control; DNS, DHCP, and Core Infrastructure Services; Mail Server and File Server Administration; IP-PBX and VoIP Infrastructure; Infrastructure Monitoring and Troubleshooting; LAN/WAN Operations and Network Support; Virtualization and Service Continuity; Production Support and Incident Resolution; Python, Java, JavaScript, C++, PL/SQL, JSON; Cloud-Connected Infrastructure; and CCNA, JNCIA, and MTCNA.

PROFESSIONAL EXPERIENCE

IT Systems and Operations Engineer (Part-Time, OPT)

Adel Group Inc, IT Department, Winnetka, California, USA | Jul 2026 - Present

- Support IT systems, platforms, and business applications for daily operations, and monitor and administer network infrastructure to catch and resolve incidents before they reach end users.
- Manage endpoint protection, access control, and firewall policy enforcement across the environment.
- Pilot automation workflows that route routine helpdesk requests to cut manual ticket handling, and deliver on-site support and helpdesk coverage.
- Coordinate procurement, vendor relationships, and technology planning, and maintain network diagrams, SOPs, and runbooks.

Graduate Research Assistant

Gannon University, Computer and Information Science Department, Erie, Pennsylvania, USA | Aug 2025 - Present

- Design and evaluate research systems for secure data transmission, traffic-flow optimization, and infrastructure-aware network defense.
- Lead first-author security projects around serverless intelligent firewalls, Zero Trust automation, and cross-cloud protection models.
- Write and co-author research papers in cloud security, edge systems, enterprise AI, and distributed infrastructure security.

Cybersecurity Lecturer (CPT)

TAAS Services LLC, Remote, USA | Aug 2025 - Dec 2025

- Delivered 15+ practical labs covering firewall configuration, network defense, threat detection, vulnerability management, and security operations workflows.
- Translated technical security topics into hands-on lessons aligned with industry practice and certification-oriented learning paths.

Senior Executive - Information Technology

S. Alam Group, Chittagong, Bangladesh | Dec 2021 - Jul 2024

- Administered Linux and Windows server environments, Active Directory, mail platforms, IP-PBX systems, and monitoring platforms for 500+ enterprise users.
- Planned and supported LAN/WAN upgrades, access-control improvements, and day-to-day infrastructure operations across multiple business units.
- Maintained production mail, file, and communication systems with a focus on uptime, secure access, and service continuity.

Technical Support Engineer - Networking

Link3 Technology Ltd., Chittagong, Bangladesh | Aug 2017 - Dec 2021

- Supported 100+ enterprise accounts across Cisco, MikroTik, Juniper, Fortinet, and Cyberoam environments in ISP and customer network settings.
- Configured and maintained firewall policies, NAT, ACLs, VPN tunnels, bandwidth control, load balancing, and WAN failover for business clients.
- Troubleshot fiber, wireless, and routed network incidents and documented configurations and escalation steps to speed up recovery.

SELECTED TECHNICAL CONTRIBUTIONS

- Administered enterprise server, communication, and identity platforms used by 500+ users across business operations.
- Maintained production mail, file, telephony, and monitoring systems with a strong focus on uptime, access control, and operational continuity.
- Worked across both systems administration and network operations, which strengthened cross-functional troubleshooting and support judgment.
- Applied practical infrastructure experience to cloud-security and automation work without losing an operations-first mindset.

SELECTED PROJECTS

- **Secure Mail and File Infrastructure Operations.** Production work across mail services, file services, directory administration, and business communication systems with a focus on service continuity and secure access.
- **DataMentor / Notebook Studio.** A reproducible workflow system that reflects my interest in clean operational processes, repeatable analysis, and practical automation.

EDUCATION

- Master of Science in Information Technology, Gannon University, Erie, Pennsylvania, USA. Expected May 9, 2026. GPA: 3.95/4.00.
- Bachelor of Science in Electronics and Telecommunication Engineering, University of Science and Technology Chittagong (USTC), Bangladesh. 2017.

TECHNICAL TOOLS

- **Networking:** TCP/IP, VLAN, routing and switching, BGP, OSPF, NAT, ACL, VPN, load balancing, failover, bandwidth control
- **Security:** firewall policy administration, Zero Trust concepts, traffic inspection, IDS/IPS concepts, access control, IAM, incident response
- **Systems:** Linux, Windows Server, Active Directory, DNS, DHCP, Postfix, Dovecot, Roundcube, IP-PBX, virtualization, monitoring
- **Cloud and Automation:** AWS fundamentals including Lambda, WAF, EC2, IAM, S3, serverless security workflows, Python scripting, Git
- **Programming:** Python, Java, JavaScript, C++, SQL, PL/SQL, JSON
